WELCOME TO

AGENTS WAR

Alpha Arena | Meraz 7.0

Organised by

Openlake, IIT Bhilai

DATE

1 November 2026

VENUE

L102

PROBLEM STATEMENT & DATASET

- We will provide 15 years of datasets from Yahoo Finance.
- Each team can choose any 10 years for training.
- A window longer than 10 years means disqualification
- Develop your own trading strategy using AI/ML, statistical methods, or other approaches.
- At the final evaluation, your strategy will be tested on a secret year or time period that was not used during training.
- Each team will start with ₹1,00,000 in virtual money to execute trades and evaluate its strategy.

RULES & GUIDELINES

- No real stock names or external data allowed
- Trades must be submitted within Event time limits
- No communication with outside sources during rounds
- Respect fair play and event conduct
- Use only provided platforms and tools

SCORING SYSTEM

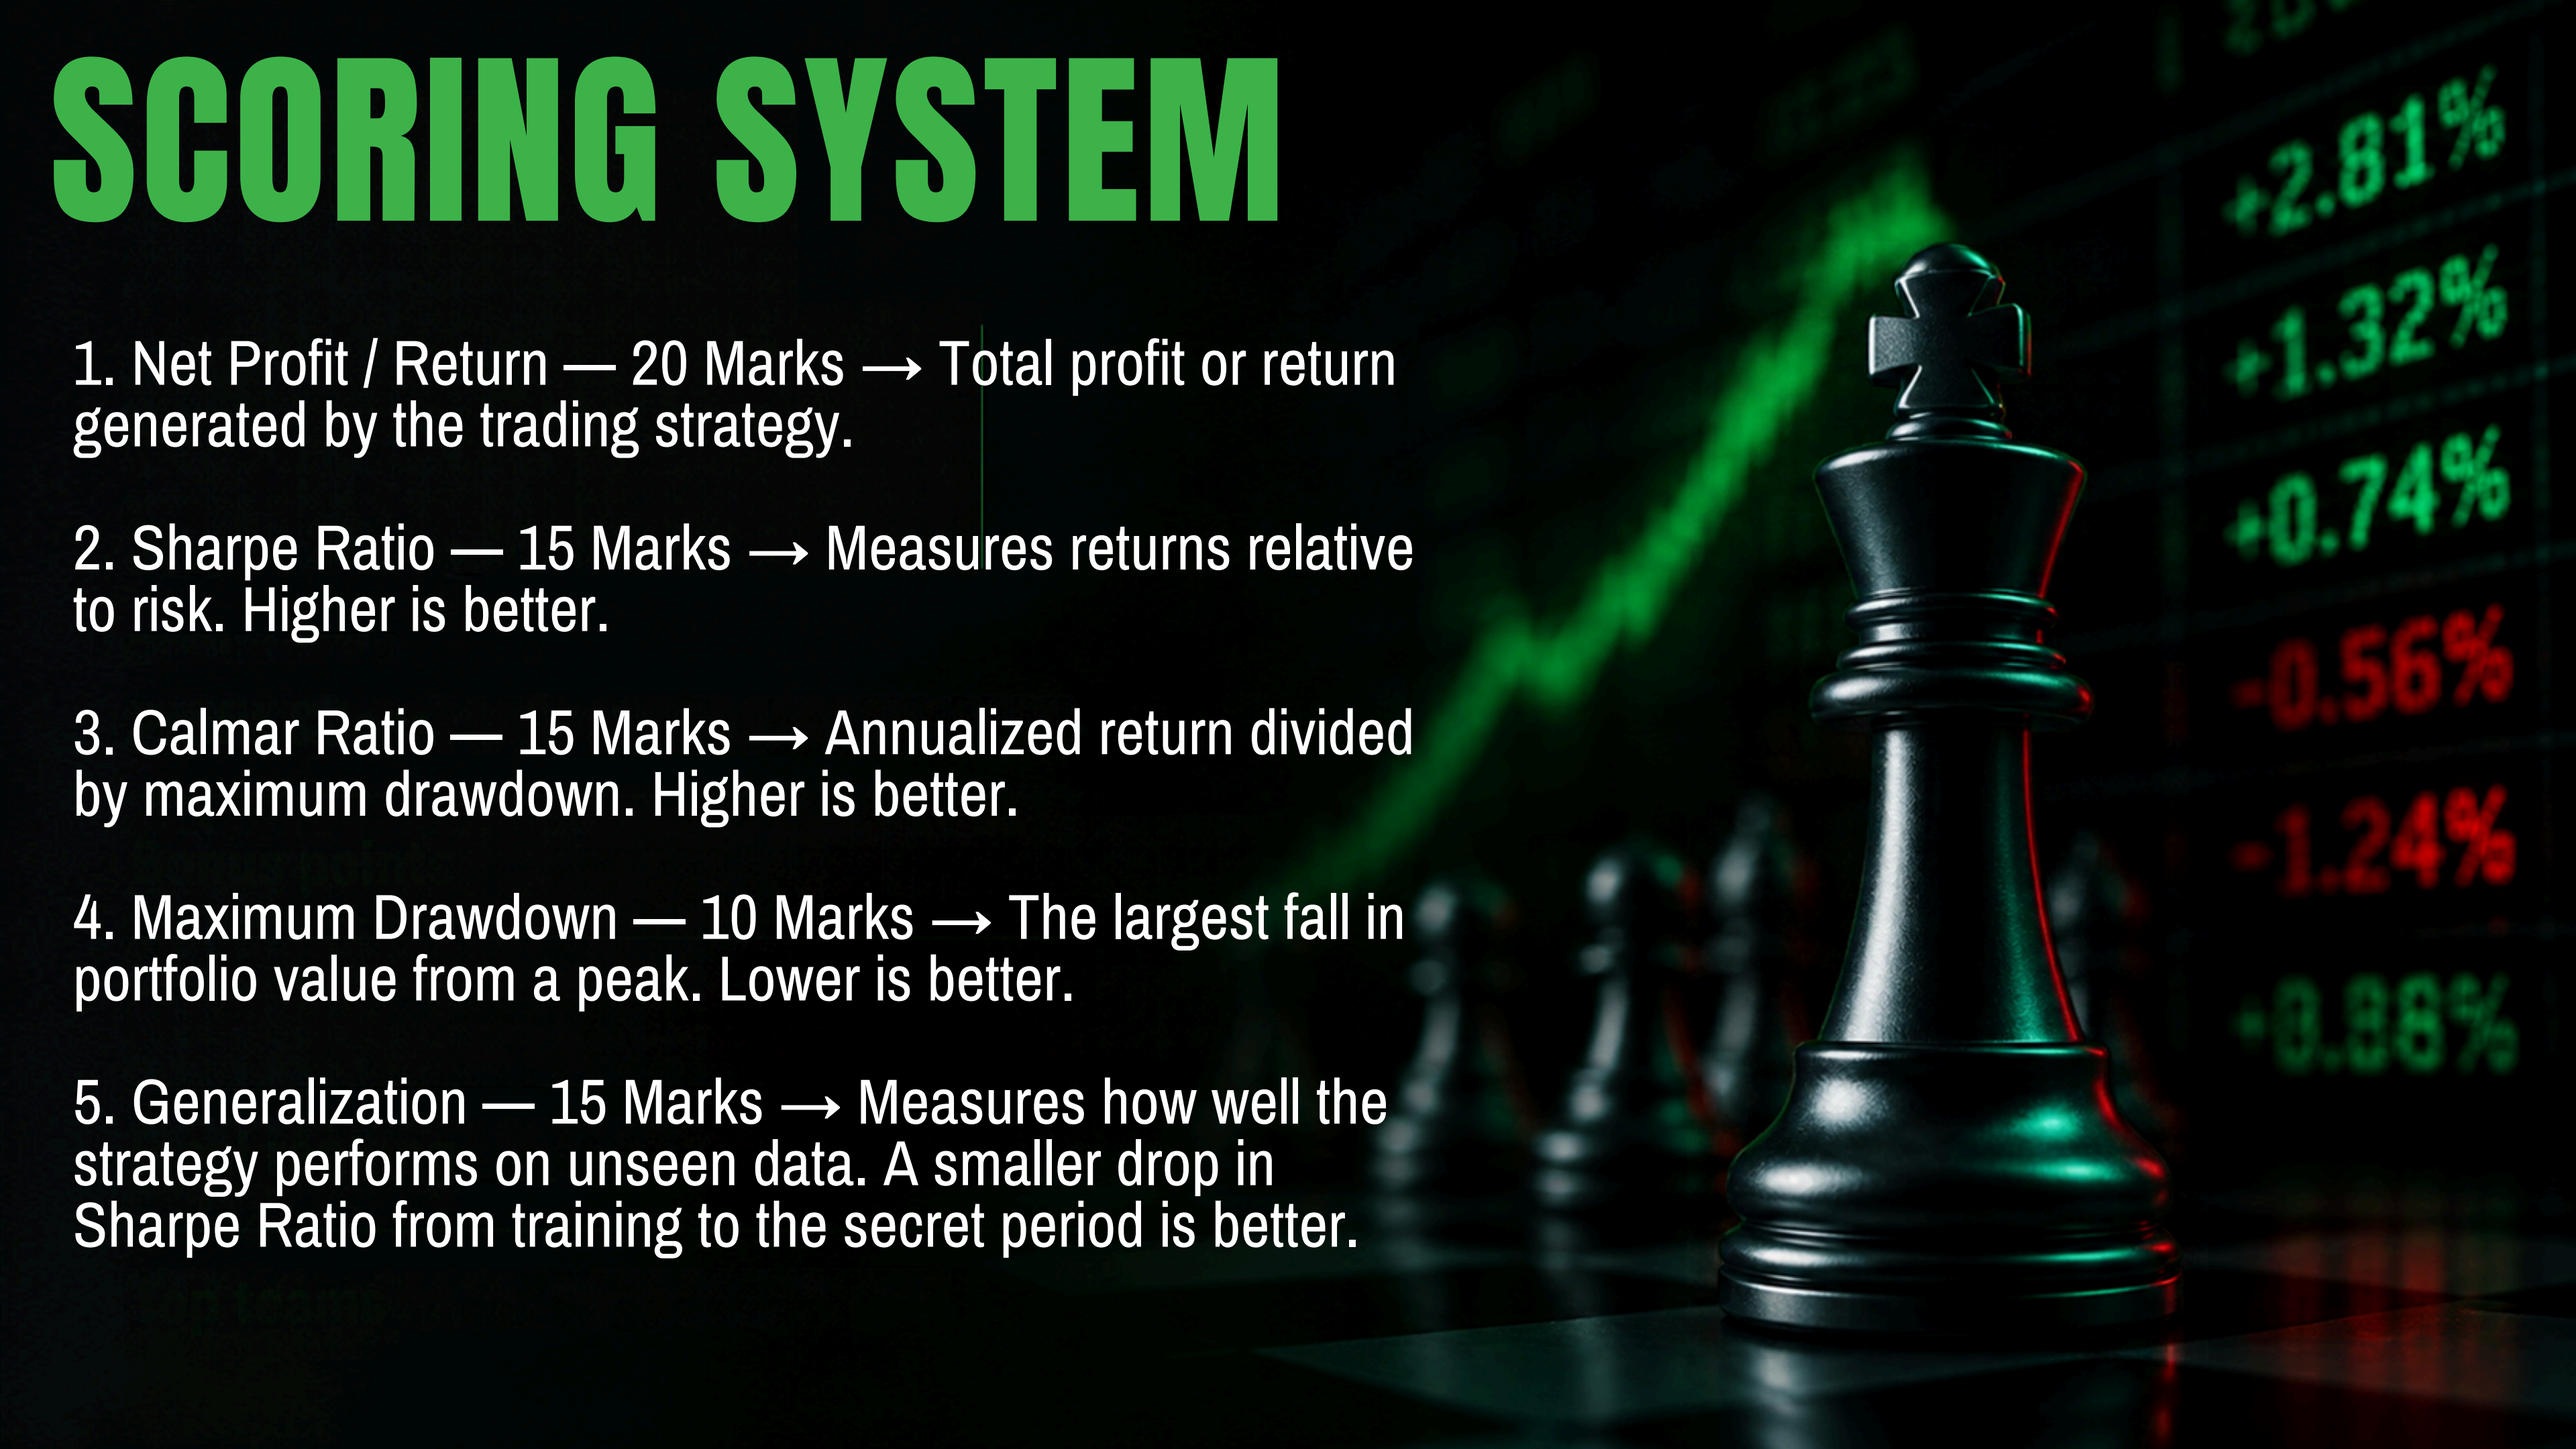

1. Net Profit / Return — 20 Marks → Total profit or return generated by the trading strategy.

2. Sharpe Ratio — 15 Marks → Measures returns relative to risk. Higher is better.

3. Calmar Ratio — 15 Marks → Annualized return divided by maximum drawdown. Higher is better.

4. Maximum Drawdown — 10 Marks → The largest fall in portfolio value from a peak. Lower is better.

5. Generalization — 15 Marks → Measures how well the strategy performs on unseen data. A smaller drop in Sharpe Ratio from training to the secret period is better.

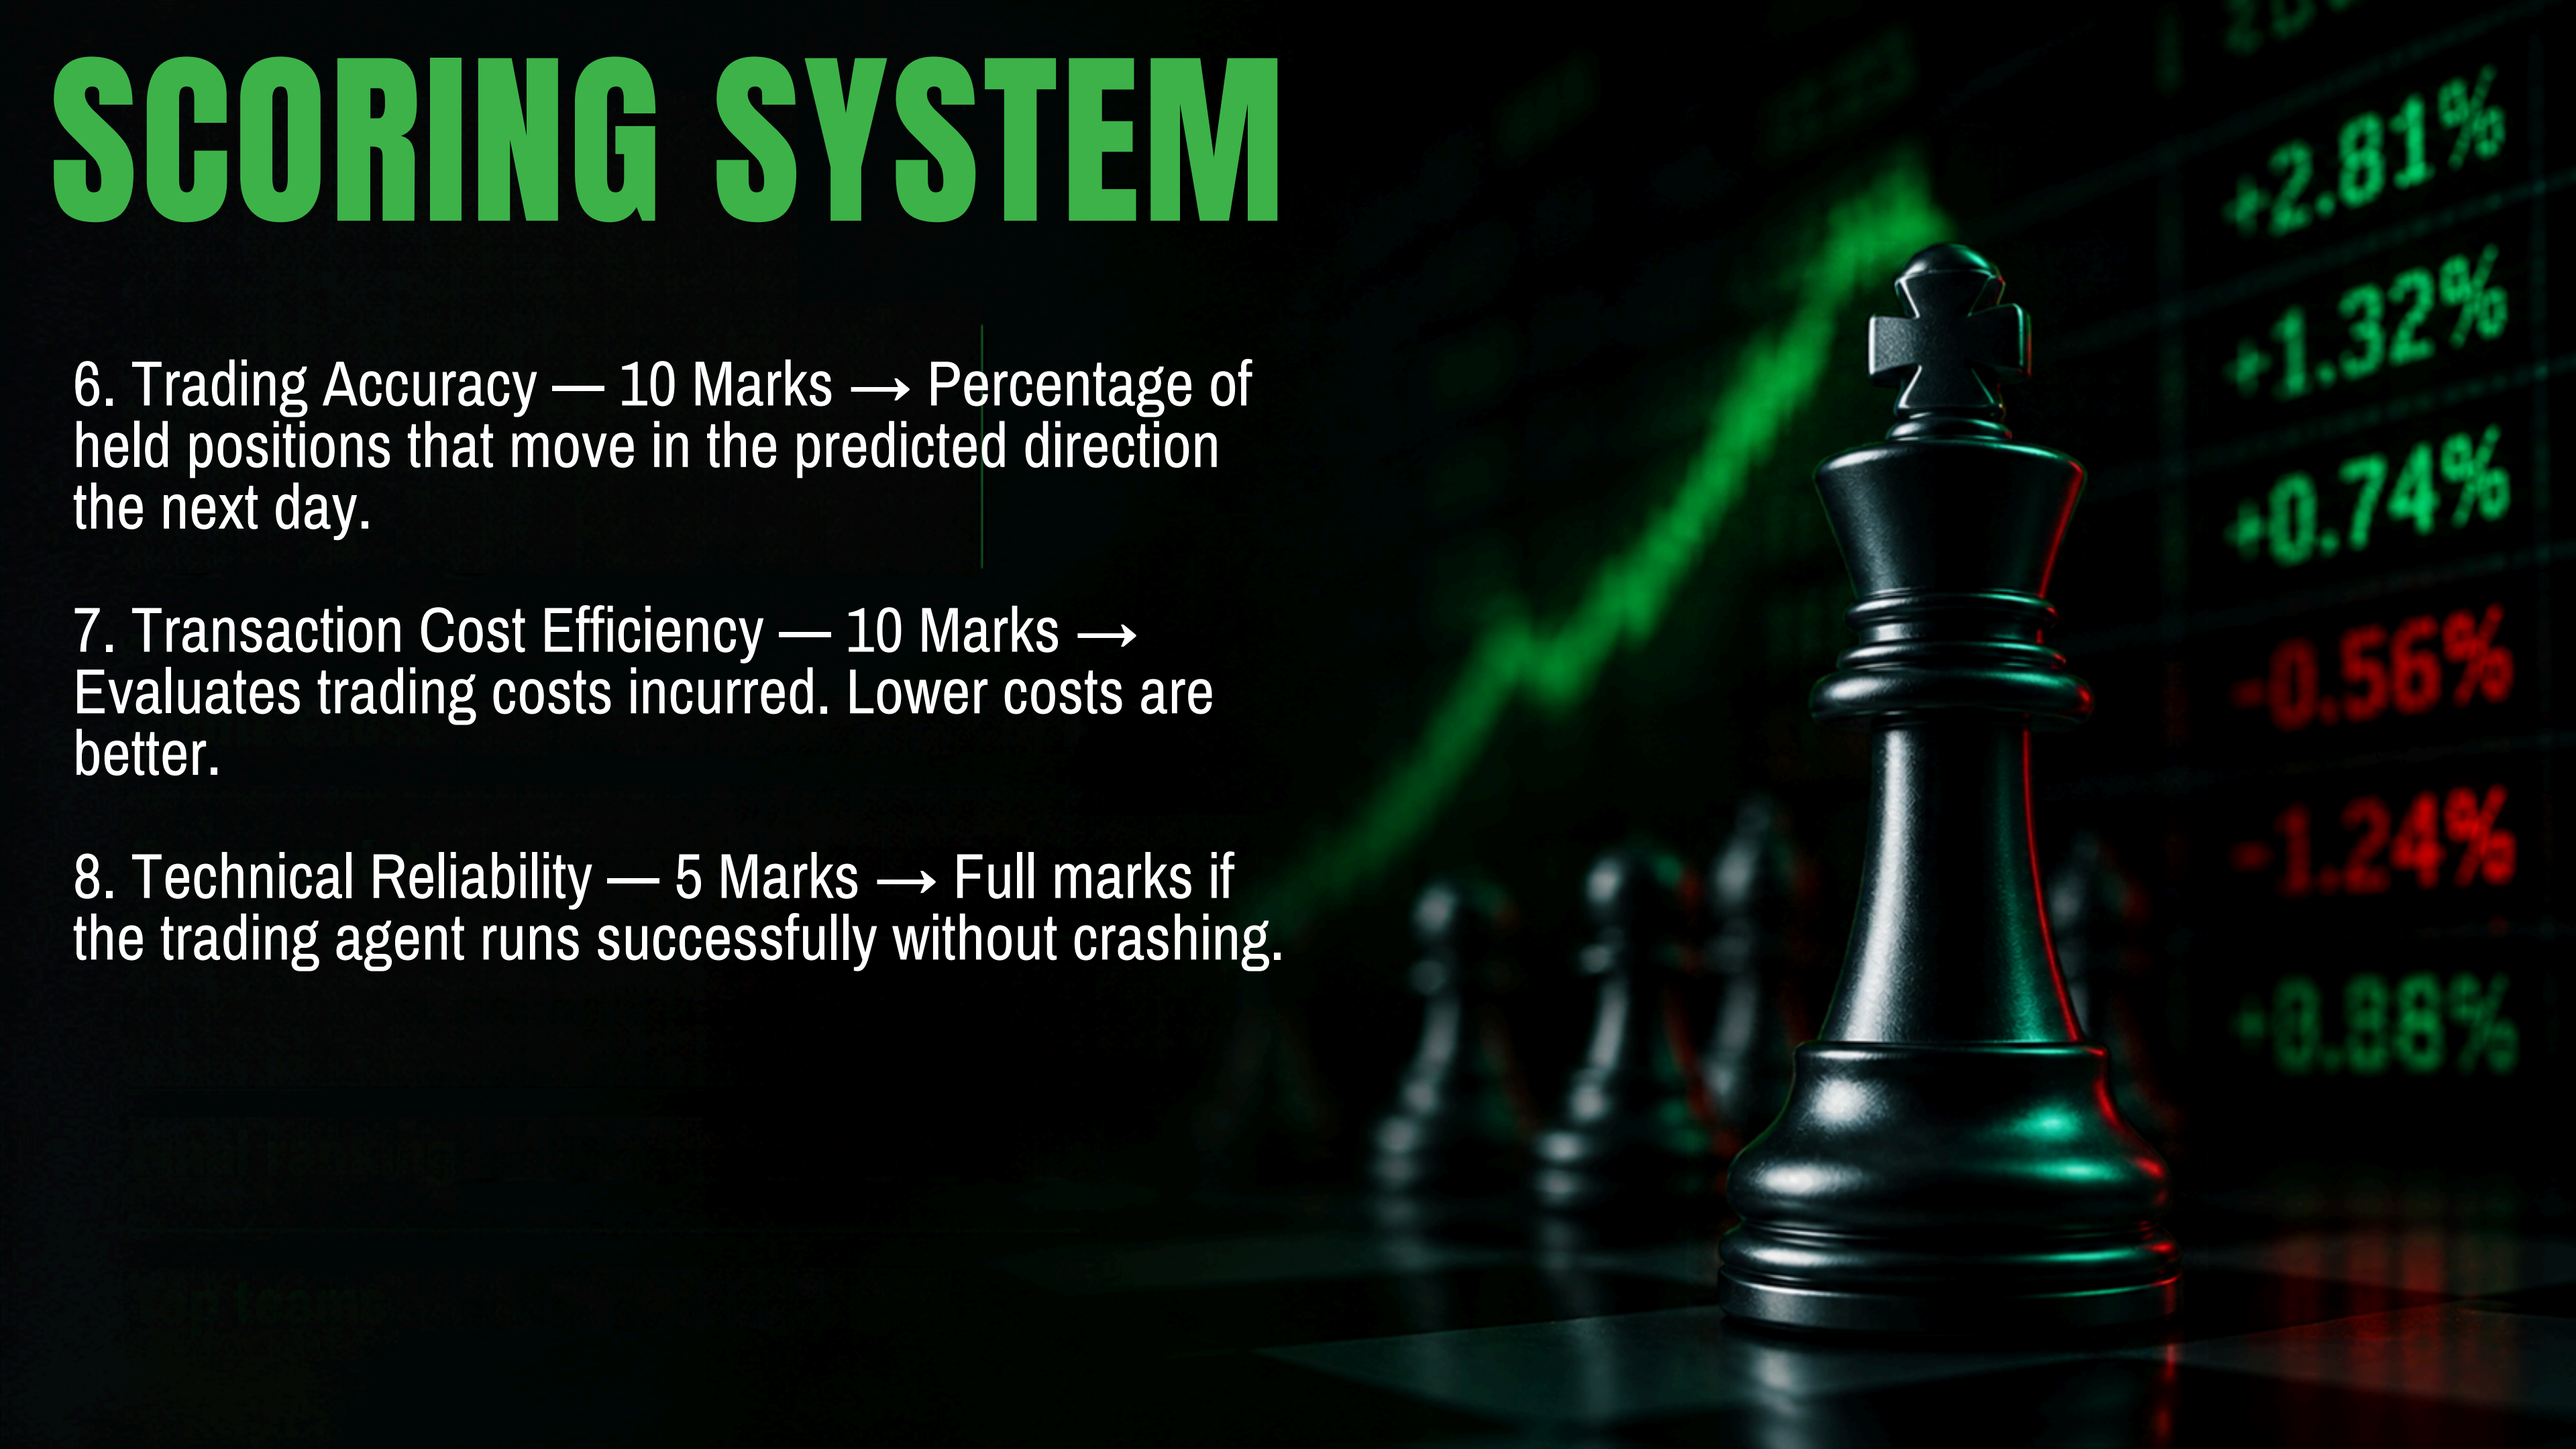

SCORING SYSTEM

6. Trading Accuracy — 10 Marks → Percentage of held positions that move in the predicted direction the next day.

7. Transaction Cost Efficiency — 10 Marks → Evaluates trading costs incurred. Lower costs are better.

8. Technical Reliability — 5 Marks → Full marks if the trading agent runs successfully without crashing.

SUBMISSION REQUIREMENTS

- strategy.py — Calculates the required trading performance metrics.
- visualization.py — Generates a cumulative portfolio growth graph (X-axis: Day; Y-axis: Portfolio Value in ₹, starting from ₹1,00,000) to show how your trading strategy performs over time.
- README — Explains the approach, selected datasets, features, and assumptions, TRAIN_WINDOW, and why you chose it.
- PPT

LET'S GOOOOO

ALL THE BEST
